The single source for high performance,  
high quality, sanitary valves.

**mark 93 series  
sanitary steam trap**

## Mark 93 Series Sanitary Steam Traps

The Mark 93 is a sanitary steam trap designed specifically for use in clean steam systems where sterility and high performance are required.

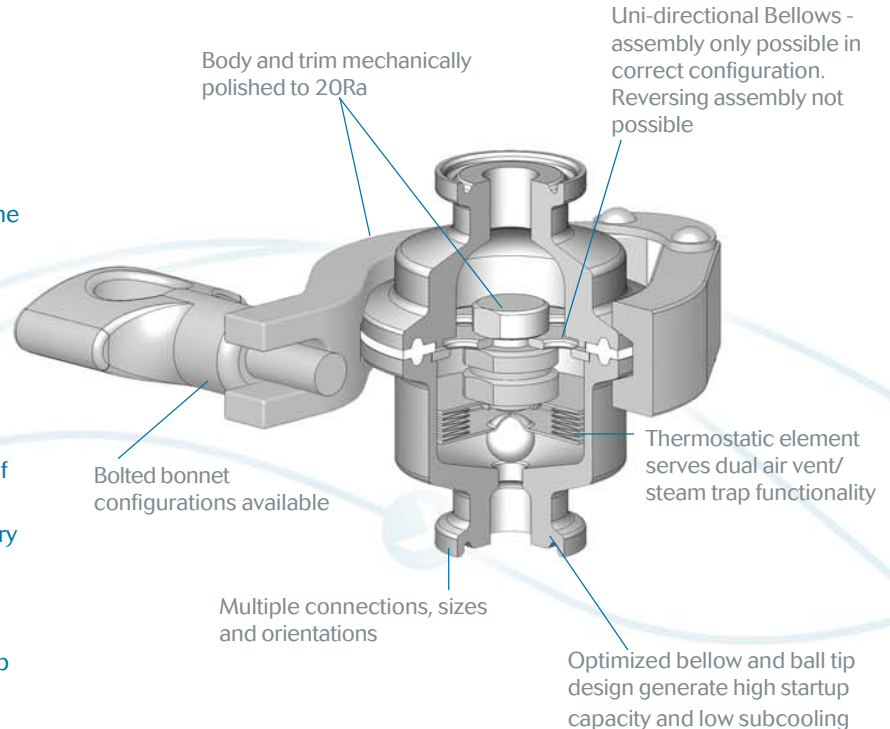

As a thermostatic device, the Mark 93 can also be used to vent air and other non-compressibles which can develop in clean steam systems.

The trap features a 20 Ra internal finish – not just on the body inlet and outlet, but on all internal surfaces.

The Mark 93 is self-draining when installed in the recommended orientation, with vertical configurations available.

The key feature of the Mark 93 is its industry leading subcooling levels. Extensive testing and development of the thermostatic bellows and internal trap geometries result in very low subcooling – as low as 1° F – with very high flow rates.

With the Mark 93, the SIP temperatures are reached faster, and maintained tighter while condensate back-up into critical system components and vessels is eliminated.
