# **JSRH Series**

Self-Relieving, Captured Vent and Air Augment options available

New!

## High Flow Bio-Pharma Clean Gas Pressure Reducing Valves

The JSRH Series high purity gas pressure regulator was designed and built specifically for Bio-Pharma gas applications. It may also be used on non-cavitating liquids, although it is not drainable.

Traditionally, manufacturers adapted their industrial gas regulators for use in biopharm by simply changing the construction materials and surface finish. Not so with the JSRH. It's been designed specifically to eliminate the exposed threaded connections associated with those traditional designs. And, it features an in-line removable trim set to facilitate quick trim change out and cleaning without valve removal or disassembly.

The durable valve body and metal trim components are machined from ASTMA479 316L SST barstock and the internal components are finished to ASME BPE SF5 20Ra  $\mu$ in (0.5 Ra  $\mu$ m), electropolished standard. The valve is outfitted with the rugged Jorlon diaphragm and Teflon seats and seals that are all FDA approved, USP Class VI compliant materials. These materials of construction enable JSRHF to withstand the rigors of SIP and CIP processes (if required for valves used on liquid applications).

- No exposed threaded connections below diaphragm
- In-line removable seat and trim facilitate cleaning and maintenance
- Barstock construction guarantees material integrity and surface finish
- Minimized internal volume
- Proprietary Jorlon diaphragm material provides exceptionally long life, CIP/SIP capability, and FDA and USP Class VI compliance
- Soft seat material for ANSI Class VI shutoff
- Panel Mount feature

#### **D**OCUMENTATION

The following documentation is shipped at no charge:

- Steriflow Unicert, a QC signed Certificate of Compliance for:
  - Material, listing heat numbers with attached MTR's
  - Surface Finish
  - FDA/USP Class VI for all thermoplastic and elastomers
- Traceability:
  - Each individual product serial number is traceable to the Unicert serial number, heat numbers and attached MTR's

Ideal for clean gases typically found in bio-pharmaceutical, pharmaceutical and food & beverage processes including:

Clean Filter Air Nitrogen Carbon Dioxide Argon Oxygen Custom purge or blanket gas Non-cavitating liquids

**NOTE:** Though not drainable in any installation orientation, this valve can be used on clean steam or non-cavitating liquids with Steriflow engineering application approval.

Other documents must be requested at time of RFQ, or order:

- ADI/TSE Free, Certified Test reports, Certificate of Origin.

#### **S**PECIFICATIONS

Sizes: 1/2" (DN15), 3/4" (DN20) & 1" (DN25)

**End Connections:** Tri-clamp, Tube weld end and NPT Standard. VCR® on Tri-clamp connections optional,

contact factory

Gauge Ports: 1/4" FNPT is standard. Consult factory for

others

**Lower Diaphragm Plate/ Body and Diffuser Body Material:** ASME SA479 316L (UNS 31603) is standard. EN 10272:2000 GR 1.4435, AL-6XN®, Hastelloy®C-22 and others are optional.

#### Trim Material\*:

- Stem: S21800 Nitronic<sup>®</sup> 60 Stainless Steel
- Wetted Spring: 316SS

**Body Seals:** Elastomer o-rings (Viton, Silicon, Kalrez); PTFE gasket - All FDA and USP Class VI compliant **Soft Seat Materials for ANSI Class VI Shut-Off:** 

- PTFE: 230 psi @ 100°F, 160 psi @ 250°F (16 bar @ 38°C, 11,1 bar @ 121°C) continuous; 150 psi @ 275°F (10,3 bar @ 135°C) for CIP/SIP intermittent [not to exceed 15 min. in one hour period]. FDA, USP Class VI
- PEEK: 230 psi @ 100°F, 150 psi @ 275°F (16 bar @ 38°C, 10,3 bar @ 135°C). FDA, USP Class VI

#### Shutoff: Class VI Spring Range:

- 5 150 psi (0,34 10,3 bar)
- 5 100 psi (0,34 6,9 bar)
- 5 50 psi (0,34 3,4 bar)
- 5 20 psi (0,34 1,4 bar)

Sizing: Please use charts in this brochure for sizing Maximum Operating Pressure: 230 psi max inlet @ 100°F / psi max ΔP (15,8 bar @ 37,7°C) Maximum Operating Temperature: 150 psi max inlet

#### **Optional Cleaning Specifications**

@ 275°F (10,3 bar @ 135°C)

- Clean for Oil-Free
- O2 Cleaning complying with ASTM G93-03 2011 and CGA G-4.1-2009

## Flow Capacity - Cv (Kv)

- 1/2": Cv 1.5 (Kv 1,3)
- 3/4" & 1": Cv 1.9 (Kv 1,64)

## Failure - Cv (Kv)

- 1/2": Cv 1.8 (Kv 1,56)
- 3/4" & 1": Cv 2.28 (Kv 1,97)

#### **Surface Finish:**

- Wetted Internal surface finish: Mechanically polished, and electropolished to ASME BPE SF5, 20 Ra μin (0.5 Ra μm) as standard\*\*
- Exterior surface finish: Mechanically polished, and electropolished to 40 Ra μin (1.0 Ra μm) as standard
- · Other finishes available upon request

Note: For a complete ancillary list of all wetted and non-wetted material specifications, please contact Steriflow Valve.

## **DIMENSIONS**

## DIN 32676 Row B (ISO 1127)

| VALVE SIZE | А    | AD   | ID   |
|------------|------|------|------|
| DN15       | 50.5 | 21.3 | 18.1 |
| DN15*      | 34.0 | 21.3 | 18.1 |
| DN20       | 50.5 | 26.9 | 23.7 |
| DN25       | 50.5 | 33.7 | 29.7 |

#### DIN 32676 Row A (DIN 11850)

| VALVE SIZE | А    | AD   | ID   |
|------------|------|------|------|

| DN15*      | 50.5 | 19.0 | 16.0 |
| DN20       | 34.0 | 23.0 | 20.0 |
| DN20*      | 50.5 | 23.0 | 20.0 |
| DN25       | 50.5 | 29.0 | 26.0 |

<sup>\*</sup> with non-standard Tri-clamp face

<sup>\*</sup> The return spring is manufactured from 316 steel.

<sup>\*\*</sup> NPT treaded end valves: Threads are not 20 Ra (0.5 Ra). Bottom of outlet cavities (inlet, outlet, or gauge ports) are machine finish only. They cannot be polished to spec without damaging the treads. For pure gas installations, Tri-clamp, or weld end connections recommended if specific surface finish is required at bottom of cavity ports.

## FEATURES & BENEFITS

## FLOW CONFIGURATIONS/ GAUGE PORTS

<sup>\*</sup> Gage ports are 1/4" FNPT. Consult factory for Tri-Clamp, VCR, or other connections or porting options.

## SAMPLE SPECIFICATIONS

Stainless Steel pressure regulator shall be made from ASTM A479 barstock material, which includes body and all wetted metal parts. Regulator shall be activated by an un-tied, FDA approved, USP Class VI certified Jorlon™ diaphragm. Regulator shall be free of exposed threads within wetted process area and valve internal to hold minimal media volume. Regulator shall have one piece diaphragm subassembly, and trim that can be replaced inline without dome/spring chamber disassembly.

## **OPTION DEFINITION**

#### **Captured Venting**

The captured vent option provides a means to vent downsteam, self-relieved gas. To enable this function, a 1/8" FNPT collar is installed on the spring housing. This feature provides a means to safely transport toxic or hazardous, self-relieved downstream gas away from the spring housing via tubing to a safe area.

<u>!VIP! This option must be specified with the Self-Relieving\* option</u> if the user wishes to transport self-relieved vented gas to a safe location.

#### **Air Augment**

The air augment option provides a means for air loading the valve spring housing for automated control. To enable this function a 1/8" FNPT collar is installed on the spring housing (the same one used for the captured vent option), and a Teflon seal nut is included to seal the adjusting screw threads to prevent leakage. The 1/8" FNPT port is used as the input fitting for loading the spring housing with instrument air to completely automate or augment manual regulator control. An I/P transducer, or a small, self-relieving air set PRV regulator is required (ordered separately) to regulate the instrument air pressure.

## \*Self-Relieving

The self-relieving option provides an internal mechanism to vent downstream pressure increase (above the set-point) though the spring housing and out a vent hole in the spring housing. If the gas is toxic, or dangerous - the Captured-Vent option (above) must also be specified. The Self-Relieving option allows for immediate pressure reduction when reducing the set point, provides a means to automatically relieve downstream pressure build-up when flow stops and the valve starts to close (sometimes called Lock-up), and alleviates pressure equalization across the orifice when the regulator is not operating.

!VIP! If selecting the Self-relieving option <u>for a Toxic or Hazardous gas - the Captured Vent option must be selected.</u> You cannot Air-Load if the Self-Relieving option is specified.

#### **Panel Mount**

The panel mounted regulator option illustrated on the next page requires a panel cut out of 1-1/2". When this option is specified, the regulator comes fitted with a threaded spring housing, and a panel mounting ring to secure the regulator to the panel.

#### **Gauge Ports - Pressure Gauge**

For inlet and outlet pressure gauges (and the gauges) are available as standard options

#### **OPTION ILLUSTRATIONS**

Panel Mount Option

Figure 1: Self Relieving Valve in Closed Position when P2 = set point and flow stops

Captured Vent Option (1/8" NPT)

Figure 2: Self Relieving Valve in Closed Position when flow stops and P2 > set point. Showing overpressure release.

## DIMENSIONS WITH PANEL MOUNT FEATURE

## 1/2" - 1" JSRH with Panel Mount and Tri-Clamp Ends

**Tamper Proof:** The tamper proof option replaces the standard adjusting knob with a stainless steel thread cover.

The graphs illustrate the change or "droop" in outlet pressures as the flow rate increases, and the lockup (setpoint rise) as flow decreases and approaches zero.

Flow Coefficient: 1.5

Range Spring: 5-20 psig (0,34-1,38 bar) Maximum inlet pressure: 230 psig (15,86 bar)

The graphs illustrate the change or "droop" in outlet pressures as the flow rate increases, and the lockup (setpoint rise) as flow decreases and approaches zero.

## Flow Coefficient: 1.5

Range Spring: 5-20 psig (0.34 - 1.38 bar) Maximum inlet pressure: 230 psig (15.86 bar)

The graphs illustrate the change or "droop" in outlet pressures as the flow rate increases, and the lockup (setpoint rise) as flow decreases and approaches zero.

Flow Coefficient: 1.5

Range Spring: 5-50 psig (0,34-3,44 bar) Maximum inlet pressure: 230 psig (15,86 bar)

The graphs illustrate the change or "droop" in outlet pressures as the flow rate increases, and the lockup (setpoint rise) as flow decreases and approaches zero.

Flow Coefficient: 1.5

Range Spring: 5-100 psig (0,34-6,89 bar) Maximum inlet pressure: 230 psig (15,86 bar)

The graphs illustrate the change or "droop" in outlet pressures as the flow rate increases, and the lockup (setpoint rise) as flow decreases and approaches zero.

Flow Coefficient: 1.5

Range Spring: 5-150 psig (0.34 - 10.34 bar) Maximum inlet pressure: 230 psig (15.86 bar)

The graphs illustrate the change or "droop" in outlet pressures as the flow rate increases, and the lockup (setpoint rise) as flow decreases and approaches zero.

## Flow Coefficient: 1.9

Range Spring: 5-20 psig (0.34 - 1.38 bar)Maximum inlet pressure: 230 psig (15.86 bar)

#### Set Point: 5 psig

## Set Point: 10 psig

The graphs illustrate the change or "droop" in outlet pressures as the flow rate increases, and the lockup (setpoint rise) as flow decreases and approaches zero.
